

1 **Mary and Jesus' DNA:**

2 It was discovered just a few short years ago that **immune cells pass from a pre-born child to the mother**
 3 **across the placenta.** Not only do these immune cells, which are the child's and thus carry the exclusive
 4 and complete DNA of the child pass across the placenta, but they persist in the mother's body for the
 5 rest of her life. A woman who has carried a son has immune cells with Y-chromosomes in her
 6 bloodstream that can now be filtered out of her blood and observed. Female children also pass cells to
 7 their mothers. Thus, **a woman truly does carry her children around inside of her with their DNA**
 8 **coursing through her heart for the rest of her life.** That isn't just a sentiment – it is a physiological fact.
 9 Thus, Mary continued and continues to this day to be a perpetual, living physical tabernacle of her Son,
 10 as she carries cells with His DNA in her bloodstream. And so now we see why **Mary was and had to be**
 11 **filled with grace and thus saved from the stain of sin from the moment of her conception eternally**
 12 **forward – because she was and is a perpetual Ark of the New Covenant.**

13 **This also explains why Mary's body was assumed into heaven immediately at the end of her earthly**
 14 **life, because her body literally contained living cells of Our Lord and thus her body could not remain**
 15 **on earth in physical death to decay in any way.**

17 **On Sacred Cardiology (Feast of the Immaculate Heart of Mary)**

18 We know from the example of Our Immaculate Mother, conceived without Original Sin, who suffered
 19 more than any non-divine human being, and the words of Christ Himself, that those who mourn are
 20 blessed, and will be comforted. Blessed Mother suffered more than any mortal person before, or since,
 21 or yet to come. And science, specifically cardiology, has just recently identified that people can and do
 22 die of a "broken heart", meaning from intense sadness and suffering. It is called **"Broken Heart**
 23 **Syndrome", or Takotsubo Cardiomyopathy.** It is a completely different physiological event from a
 24 myocardial infarction, or heart attack and outcome (heart failure) are exactly alike. It centers
 25 on **abnormal movement of the interior heart wall of the left ventricular apex.** Remember that. It is
 26 going to be important in a minute. So, if Mary Immaculate did indeed suffer more than any mortal
 27 person ever, WHY DIDN'T SHE DIE OF A BROKEN HEART, WHICH IS A VERY REAL THING?

28 Well, as was covered in the **Science of the Immaculate Conception and Assumption** essay, cells pass
 29 from every unborn child to the mother, and then persist in the mother's body for the rest of her life.
 30 Now, we all thought that factoid was pretty spectacular by itself, right? Oh, just wait until you hear THIS:
 31 **Some of the cells passed from unborn children to their mothers are STEM CELLS.** These stem cells
 32 persist in the mother's body for the rest of her life, and when a trauma happens to the mother, **the stem**
 33 **cells from the baby spring into action, migrate to the area where help and healing are needed,** where
 34 they then undergo cellular maturation and integrate themselves into the mother's tissue. Guess what
 35 the most common locus for these healing events is? Her heart. The Blessed Virgin didn't die of grief,
 36 because she carried in her body stem cells from Our Blessed Lord and Savior Jesus Christ, which grafted
 37 themselves into her Immaculate Heart and kept her from dying of **Takotsubo cardiomyopathy.** His stem
 38 cells kept her from dying of a broken heart – until she had completed the course of her earthly life and it
 39 was time for her to be assumed into heaven and crowned its Queen by her Son.

40 Three concluding points:

- 41 1. Women who have murdered by abortion their unborn children have been healed later in life by stem
- 42 cells donated by the very children they murdered.
- 43 2. The locus of **Takotsubo cardiomyopathy** in the heart is the interior wall of the left ventricle at the
- 44 apex. This is literally "the bottom of your heart", or the "depths of my heart".
- 45 3. All of the Eucharistic miracles involving the Host manifesting as flesh that have been tested have
- 46 yielded the same results. The flesh is that of a human male, blood type AB+, and the cells are
- 47 myocardium – that is, interior heart wall.

48 **Our Blessed Lord comes to us in the Eucharist, and will graft our broken hearts with His own flesh, just**
 49 **as He did with His Mother. But we have to love Him, which means follow His Law and confess our sins,**
 50 **and have hearts that are capable of breaking, and which we allow to be potentially broken in the first**
 51 **place by loving others. ...Who healeth the broken of heart, and bindeth up their bruises. PSALM 146: 3**
 52 **There are two phases to Mary's existence. The first phase was from the moment of her conception**
 53 **until the Annunciation,** which is when Jesus was conceived in her womb by the Holy Ghost. The second

phase was from that moment of Jesus' conception forward for all eternity. Each phase has its own physiological delight attached to it which required Mary to be a sinless vessel for Our Lord. First, the pre-Annunciation period. As it has been discovered just within the last few decades, all baby girls have all of the eggs that are ever going to be in their ovaries fully formed not just at birth, but fairly early in their fetal development phase. Unlike men who are continuously producing new sperm, a woman's eggs aren't created and formed with each menstrual cycle. All that is happening during a cycle is that an egg, which has been fully formed in a woman's body since she was a pre-born fetus, is released into the reproductive tract. What this means theologically is that the egg containing the 23 chromosomes that God would miraculously fertilize with 23 chromosomes that He miraculously supplied (including a Y chromosome) to become the Word Made Flesh, Jesus Christ, was physically present inside Mary's body from the time that Mary was inside of her mother's, St. Anne's, womb. That egg, and those chromosomes, that physical constituent of Our Blessed Lord was present inside of Mary's body, waiting to be . . . if I may use the word . . . consecrated. The word consecrate, when broken into its Latin components means: **Con: With Secr: Holy Ate: Territory of a Ruler** And so, Mary was, from the time she was inside St. Anne's womb, already carrying a portion of Our Lord's physicality, namely 23 of His chromosomes. And thus **Mary was, from her very beginning, already a proto-tabernacle, already the Ark of the New Covenant, carrying within her what would be consecrated into The Law Incarnate, The High Priest, and The Bread of Life – just like the Old Ark, except perfected and fully fulfilled as God Incarnate.** And as we know from the book of Exodus, the Old Ark had to be "perfect". And thus, **the Ark of the New Covenant was TRULY perfect, except this perfection was a perfection that only God Himself could accomplish: the perfection of Mary, full of grace and thus saved from all sin, including Original Sin.**

The second phase is actually broken into two sub-phases. The first sub-phase is when Mary was pregnant with Jesus and His entire body was inside of hers. The second sub-phase is that phase from the time of Jesus' birth forward into all eternity. **Jesus is STILL, to this day, right now as you are reading this, physically inside of Mary in a unique way.** It was discovered just a few short years ago that immune cells pass from a pre-born child to the mother across the placenta. Not only do these immune cells, which are the child's and thus carry the exclusive and complete DNA of the child, pass across the placenta, but **they persist in the mother's body for the rest of her life.** A woman who has carried a son has immune cells with Y-chromosomes in her bloodstream that can now be filtered out of her blood and observed. Female children also pass cells to their mothers. **Thus, a woman truly does carry her children around inside of her, with their DNA coursing through her heart, for the rest of her life. That isn't just a sentiment – it is a physiological fact.** Thus, Mary continued and continues to this day to be a perpetual, living physical tabernacle of her Son, as she carries cells with His DNA in her bloodstream. And so **now we see why Mary was and had to be filled with grace and thus saved from the stain of sin from the moment of her conception eternally forward – because she was and is a perpetual Ark of the New Covenant. This also explains why Mary's body was assumed into heaven immediately at the end of her earthly life, because her body literally contained living cells of Our Lord and thus her body could not remain on earth in physical death to decay in any way.**

Knowing that Christ rising again from the dead, dieth now no more, death shall no more have dominion over Him. -Romans 6: 9

She simply was afforded the same physical resurrection that all of the faithful will receive, albeit instantaneously for her, given her very special state, both spiritually and physically. This is what is doctrinally referred to as "The Assumption". Finally, if you are a quasi-Christian Protestant-pagan schismatic, or even a lapsed or unsound Catholic reading this and it has made you the least bit angry, you need to sit down and ask yourself one excruciatingly simple question: **WHY? Hail Mary, full of grace, the Lord is with thee. Blessed art thou amongst women, and blessed is the fruit of thy womb, Jesus. Holy Mary, Mother of God, pray for us sinners, now and at the hour of our death. Amen. Our Lady, Assumed into heaven, pray for us. Lord Jesus Christ, have mercy on us and on your Holy Catholic Church.**
